

fireflyMobile™

Secure authentication is now only an SMS away

fireflyMobile™ delivers smart two factor authentication by sending a one time passcode to a mobile phone in an SMS text message.

The one time passcode can then be used to sign into your web application, sign onto your corporate virtual private network (VPN) or offer added transaction level security.

Benefits

- Two Factor Authentication that is suitable for **mass deployment**
- **No hardware tokens** to purchase, replace or maintain
- **Convenient** use of mobile phone
- **Reduce support costs and increase productivity**
- One time passcodes **delivered via a secondary channel**
- **Rapid** deployment across the organisation
- **Cost-effective** solution

Features

- Virtual Private Networks (VPN) authentication
- Web based authentication
- Transactional level authentication
- Connect to existing user datastores (LDAP, Active Directory and RDBMS)
- Account enrolment via the Firefly Management Console
- Available as an appliance for rapid deployment
